

Company Profile Solutions for Energy Independence

We offer...

- Off-Grid power supply based on renewable energies
- The most comprehensive range of components and kits for Off-Grid energy systems, kits, PV and wind power
- Training, technical support, installation services
- B-to-B 24/7 order processing via online order platform, our unique B-to-B online store with access to data sheets, product images, certificates etc.
- International product catalog

Advantages for wholesalers / distributors

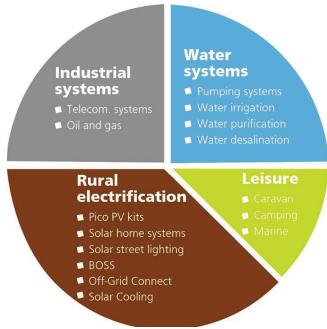

- A single point of purchase
- Price advantages / discounts
- International supply sources
- Excellent supply chain management
- Knowledge transfer

Advantages for suppliers

- Access to new markets
- Savings in marketing costs
- Feedback from the markets
- Suggestions for product improvement and development

Systems and projects

As system integrator we give our customers technical advice on design, engineering and installation of small and medium sized photovoltaic systems.

Quality through networks, experience and expertise

- International company structure
- Knowledge of local climate, energy data and conditions
- Excellent communication and processing skills thanks to our own regional sites (customs duties, taxes, logistics)
- ISO 9001 and AEO certifications
- Multinational experts team
- Extensive experience in the Off-Grid sector and in the field of international project management
- Individual sub-sector specialisation

All you need for your Off-Grid system

Phaesun have been specialising in the sales, service and installation of Off-Grid photovoltaics and wind energy systems since its foundation in 2001. We offer a sophisticated product and service portfolio for Off-Grid power supply. The Phaesun business activities include three divisions:

Components & Sales:

The Solar Component and Sales Division is responsible for the wholesaling of selected, high quality Off-Grid-components. With the One-Stop Shop Phaesun provides the most efficient B-to-B market platform for off-grid photovoltaic systems and components. Visit the Phaesun Online Order Platform to get information about the full Off-Grid product range!

Projects & Systems:

The Projects and Systems Team is a service division, realizing entire projects for Off-Grid electrification including system sizing and the design of complete solar systems. Through our experience and the expertise of our associated companies we are able to give our customers technical advice on design, engineering and installation of Off-Grid systems for all kinds of applications.

Research & Innovation:

With the R&I team, Phaesun concentrates on application-oriented research activities and tests innovative application possibilities of Off-Grid power supply. Phaesun works closely with renowned research institutes and international partners. The focus lies on applications for agriculture such as solar cooling and the provision of water.

Through the members of the Phaesun Group and our network of associated companies we have successfully supplied and managed hundreds of sustainable energy projects in more than 80 countries worldwide.
